

THE COMPLEAT SCULPTOR

"YOU SUPPLY THE TALENT... WE'LL SUPPLY THE REST!"

Sculpey III – Granitex Stone Colored Clay

Characteristics

Granitex is the clay you can take for Granite! Tiny fibers mixed into the clay create this unusual stone like effect. Mixing will not alter the appearance of the clay; it will maintain the illusion.

This fabulous clay is easy to condition and tool. Granitex is available in eight subtle, pastel tones which can be painted with water base acrylics and dyes if desired. Try mixing a bit of Sculpey III into the Granitex to create your own tint.

Curing

Granitex should be cured in a preheated 275 degree F (130 degree C) oven for 15 minutes per quarter inch of thickness. DO NOT MICROWAVE.

Use

Granitex can be used to make figurines, jewelry, and home decor. Miniaturists have found it very useful in making architectural detailing.

Hint: Use Blue Granitex to imitate Denim for clothing on figures. Cover an inexpensive glass vessel with Granitex and decorate it with Sculpey III flowers, birds, fruit, etc.

Rubber stamp Granitex with permanent pigments to create jewelry, plaques, paperweights, and home décor items. Kids enjoy customizing their light switch covers, and Granitex is a great partner with charms, molds and small sculptures.

Storage

Sculpey polymer clay products should remain fresh if properly stored in a cool place, away from heat and direct sunlight.
